FLOW 1

No Start: one tap finishes the set

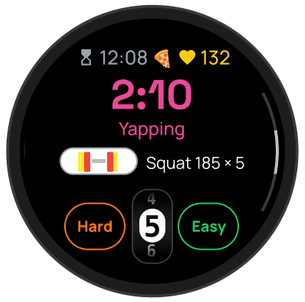

Yapping runs until you finish the set, so the yapping time includes the set itself. Shown with the recommended Hard / rep wheel / Easy; any of the finishing styles on the later pages fits here.

Yapping → finish set → Resting → rest ends → Yapping

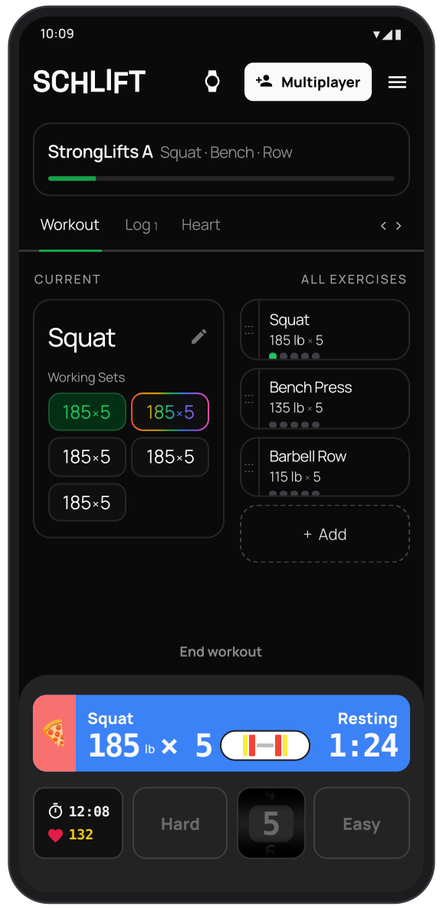

Apple Watch

Wear OS

Pink count-up, from the start of the workout or the end of the last rest. Do the set, then finish it.

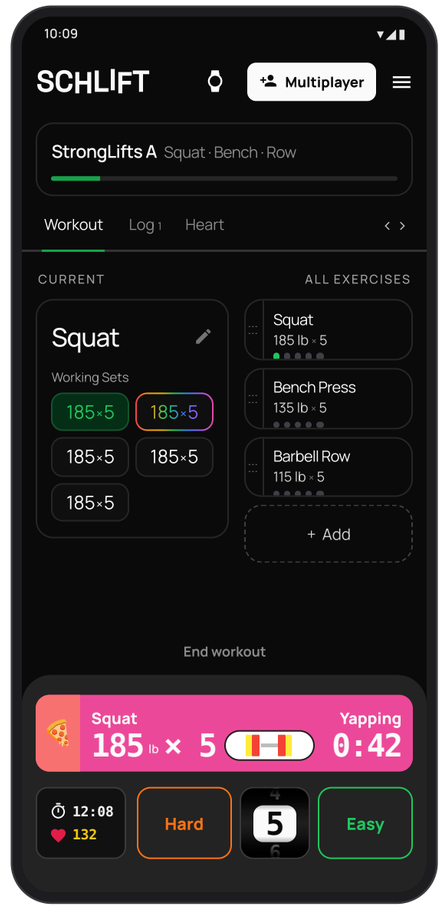

Apple Watch

Wear OS

Blue countdown. Buttons are greyed: tapping one logs the next set early. When rest ends, back to Yapping.

Apple Watch

Wear OS

Pink count-up from the end of rest until the next set is finished.

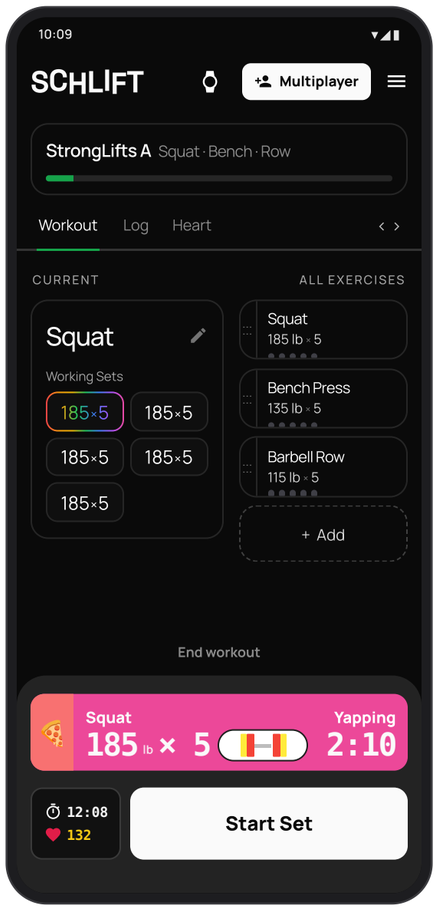

The rep wheel starts on the target; tap it to log the set at the reps it shows. Hard and Easy log it at those reps and say how it felt. Next session: Easy adds weight sooner, a hit follows the normal progression, Hard holds the weight (three in a row deload), a miss holds it and two misses in a row drop it 10%. Warmups finish with a single Done button.

FLOW 2

Start Set, then finish the set

Start Set is back, as it shipped in 0.10, so yapping stops the moment you start lifting and the set gets its own green Lifting time.

Yapping → tap Start Set → Lifting → finish set → Resting

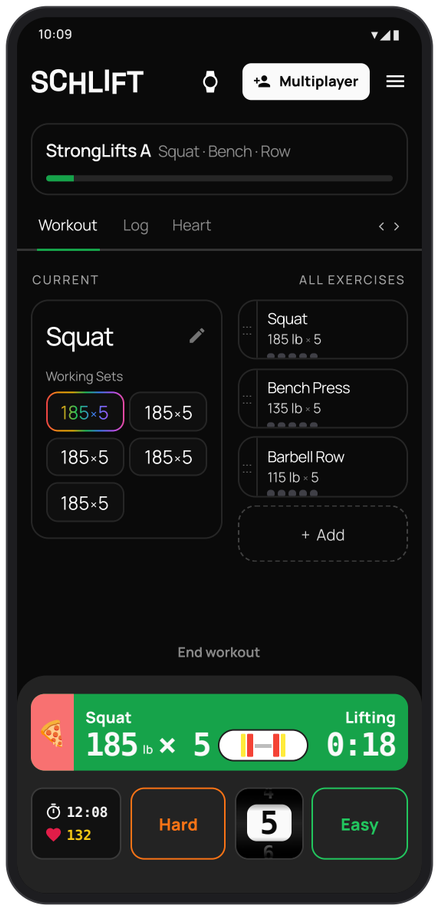

Apple Watch

Wear OS

Pink count-up, from the start of the workout or the end of the last rest. Start Set when you get under the bar.

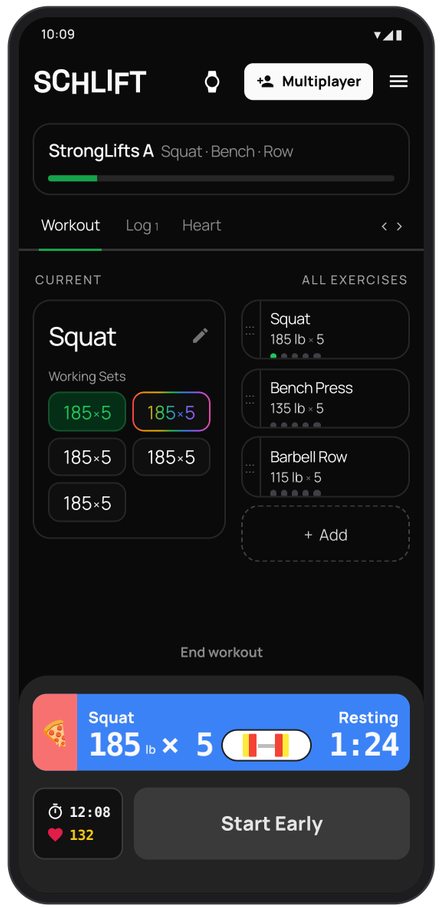

Apple Watch

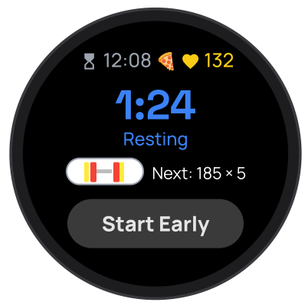

Wear OS

Green count-up while you lift. Finish the set; that tap logs it and starts rest.

Apple Watch

Wear OS

Blue countdown. Start Early skips the rest of it. When rest ends, back to Yapping.

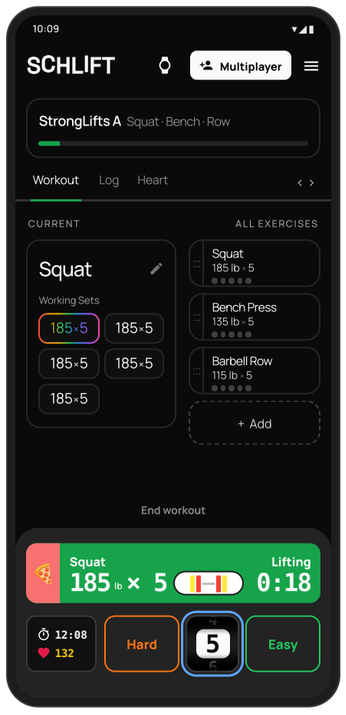

The rep wheel starts on the target; tap it to log the set at the reps it shows. Hard and Easy log it at those reps and say how it felt. Next session: Easy adds weight sooner, a hit follows the normal progression, Hard holds the weight (three in a row deload), a miss holds it and two misses in a row drop it 10%. Warmups finish with a single Done button.

FINISHING A SET · RECOMMENDED

Hard / rep wheel / Easy

The rep wheel starts on the target. Tap it to log the set; scroll it first if you got fewer. Hard and Easy log the set at the reps on the wheel and say how it felt. On the watch the crown or the bezel turns the wheel.

Hit it

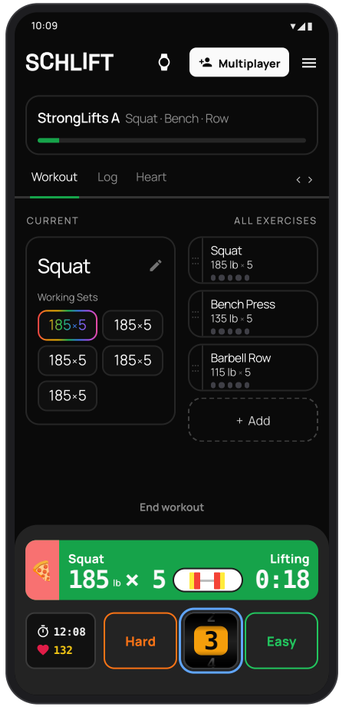

Apple Watch

Wear OS

One tap on the 5.

Missed: got 3

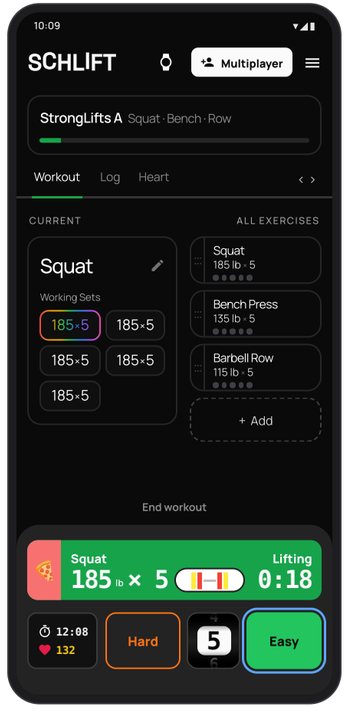

Apple Watch

Wear OS

Scroll the wheel down to 3 (or turn the crown): it turns amber. Tap it.

Easy

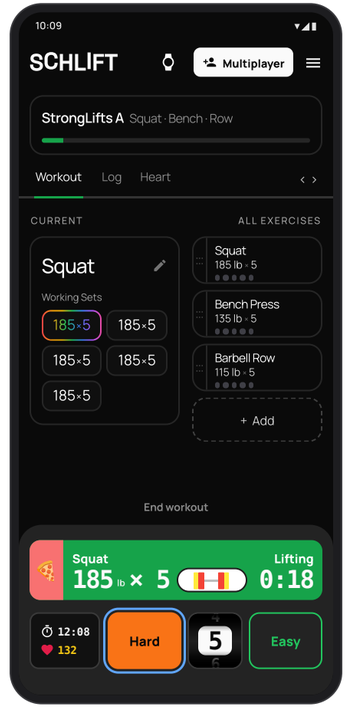

Apple Watch

Wear OS

One tap on Easy: 5 reps, plenty left.

Hard

Apple Watch

Wear OS

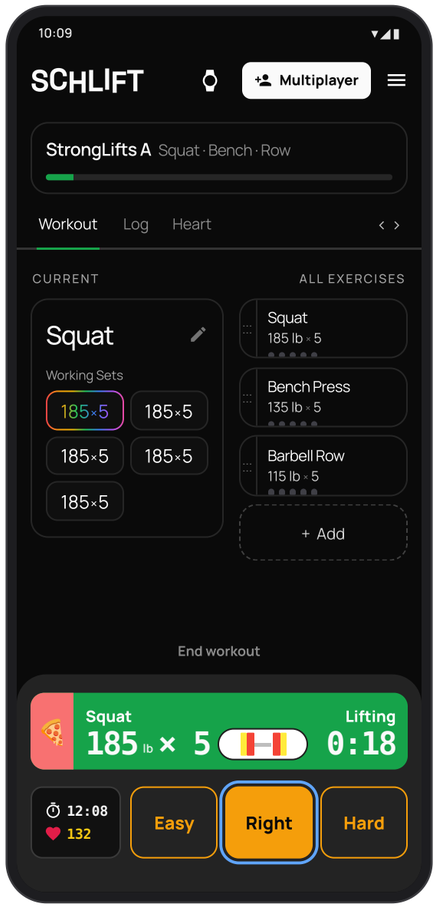

One tap on Hard: 5 reps, but a grind. Scroll first if you also missed reps.

The rep wheel starts on the target; tap it to log the set at the reps it shows. Hard and Easy log it at those reps and say how it felt. Next session: Easy adds weight sooner, a hit follows the normal progression, Hard holds the weight (three in a row deload), a miss holds it and two misses in a row drop it 10%. Warmups finish with a single Done button.

Easy / Right / Hard

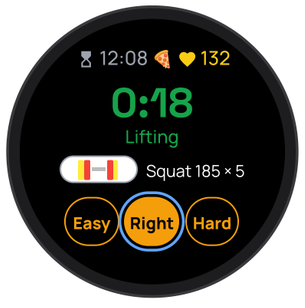

The set is logged as prescribed and the answer is how it felt. Nothing records the reps you actually got.

Hit it

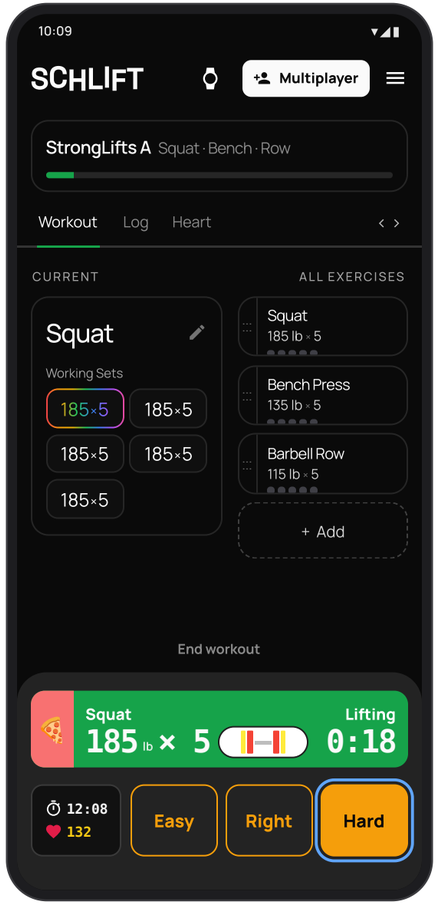

Apple Watch

Wear OS

One tap on Right.

Missed: got 3

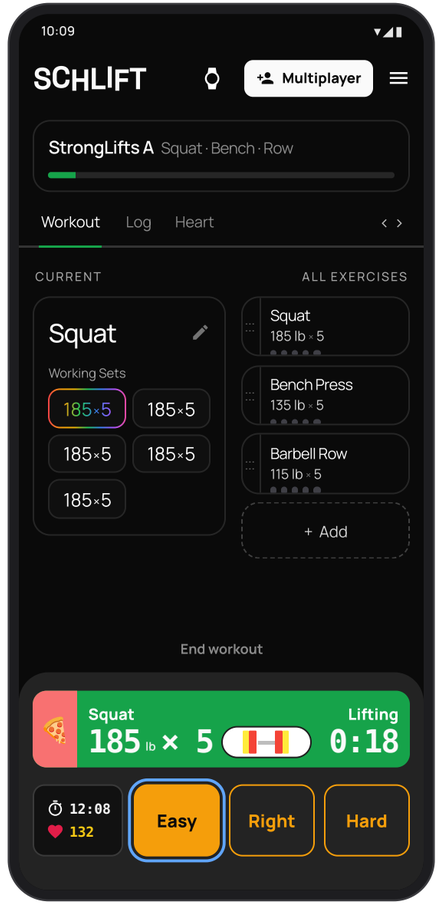

Apple Watch

Wear OS

Tap Hard. The 3 reps are not recorded unless you fix the set's chip on the phone later.

Easy

Apple Watch

Wear OS

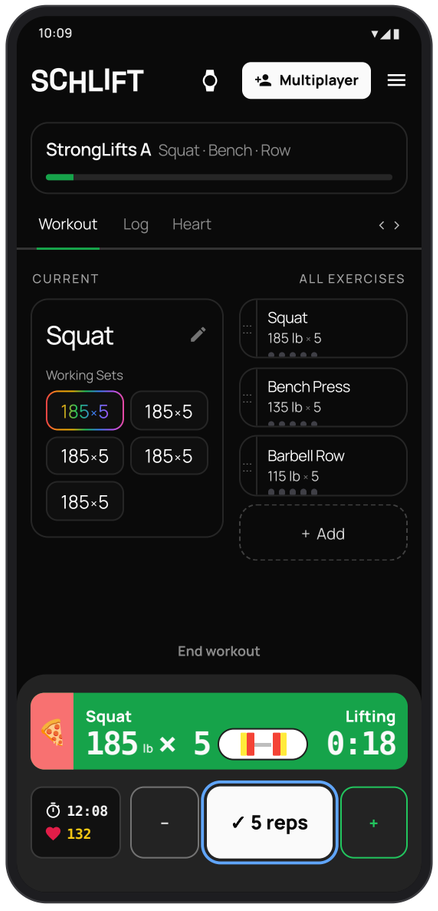

One tap on Easy.

Next session: Easy adds weight sooner, Right follows the normal progression, Hard holds the weight, three Hard sessions in a row deload. Misses only count if fixed afterwards.

− / ✓ 5 reps / +

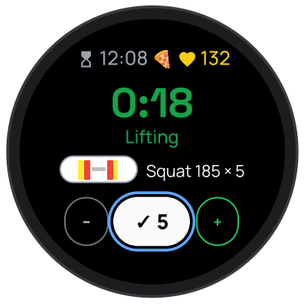

A rep stepper that starts on the target. Fewer reps is a miss; more reps than the target is the easy signal.

Hit it

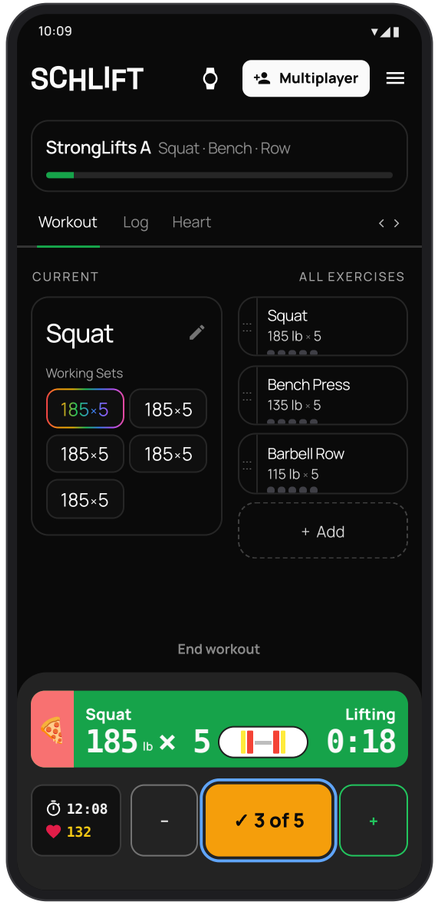

Apple Watch

Wear OS

One tap on the 5.

Missed: got 3

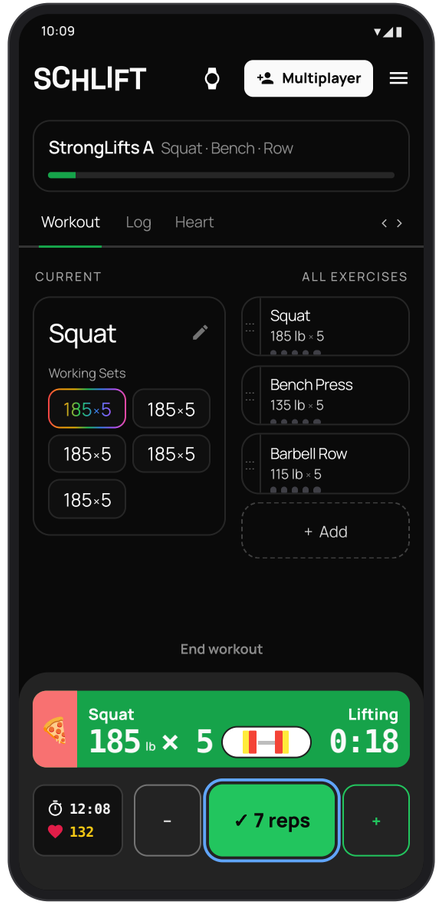

Apple Watch

Wear OS

Tap − twice (or turn the crown), then tap ✓.

Easy

Apple Watch

Wear OS

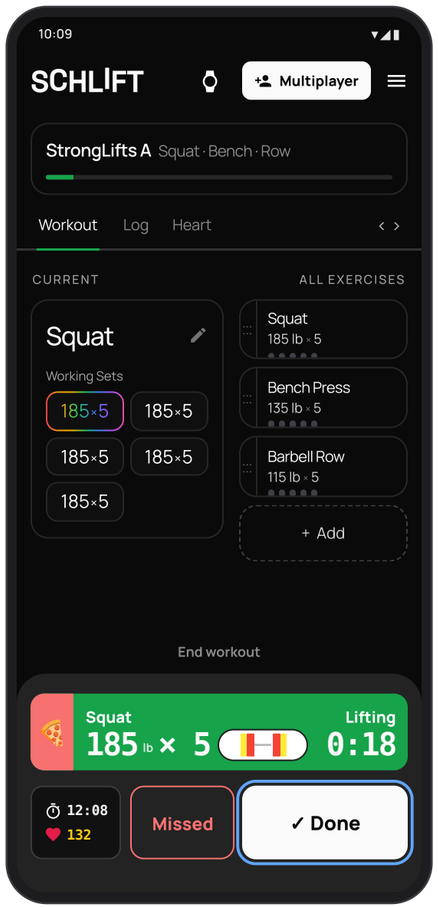

Only shows up if you do extra reps: + twice, then ✓. Most people stop at the target, so easy is rarely recorded.

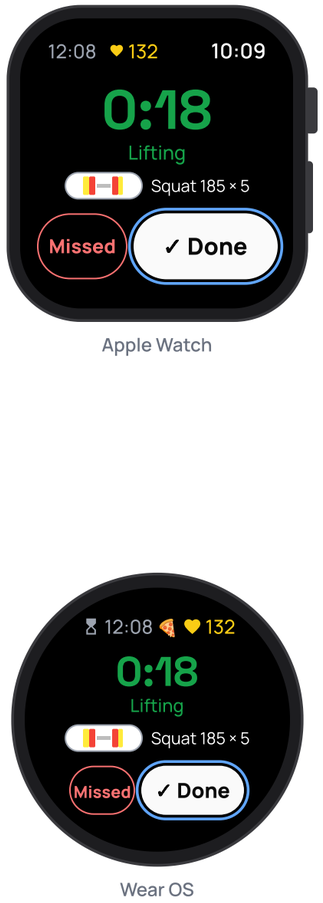

Next session: reps over the target add weight sooner, a hit follows the normal progression, a miss holds the weight and two misses in a row drop it 10%.

Missed / ✓ Done

Two buttons. Done is the usual tap; Missed swaps the row for the rep counts so you can say how many you got.

Hit it

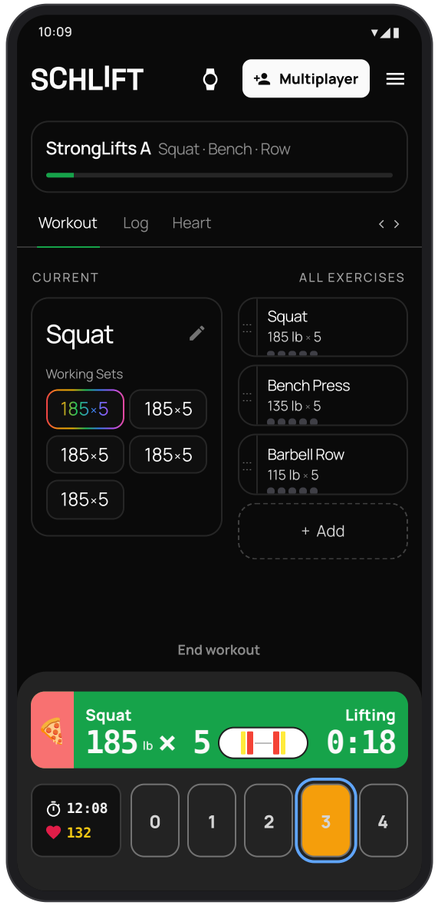

Apple Watch Wear OS

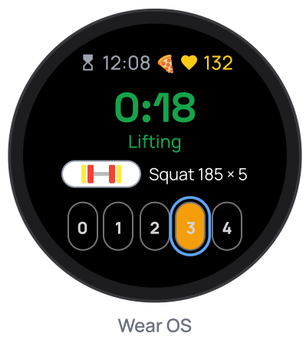

One tap on ✓ Done.

Missed: got 3

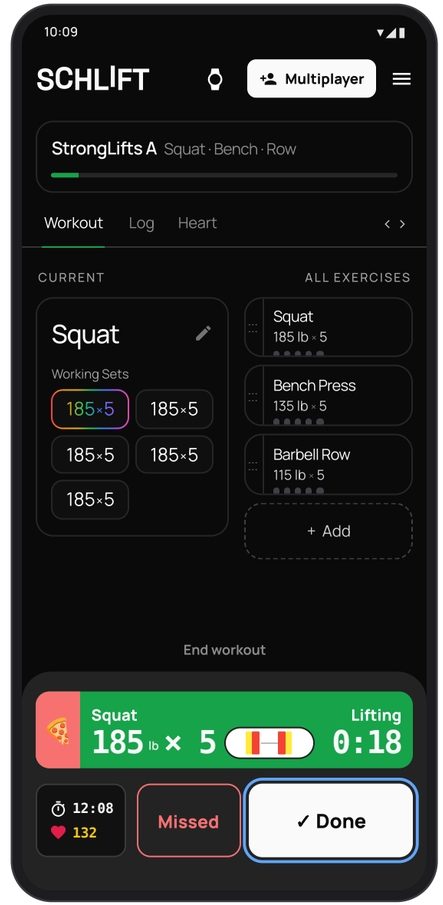

Apple Watch

Wear OS

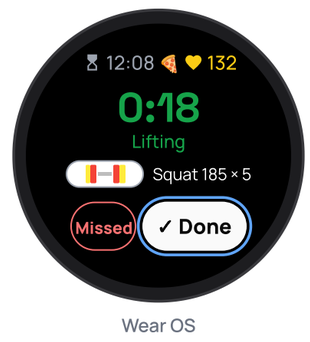

Tap Missed, then 3. Two taps, and the second screen is easy to fat-finger.

Easy: not captured

Apple Watch

Wear OS

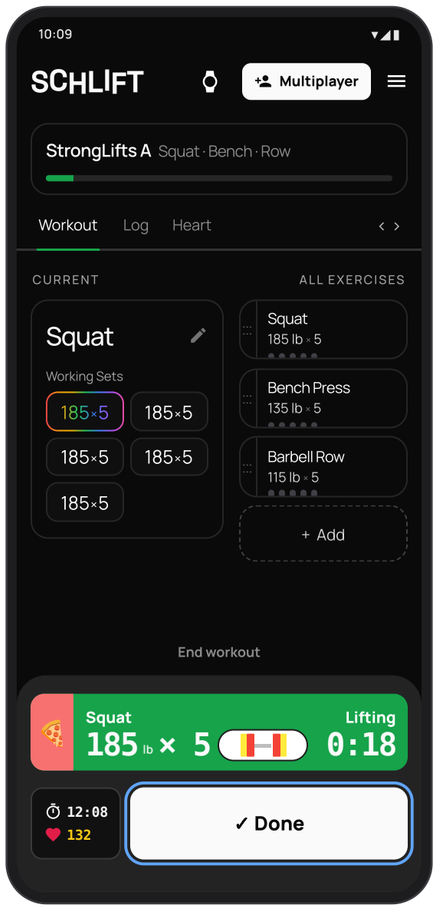

Not captured: an easy set looks the same as any other hit.

Next session: a hit follows the normal progression, a miss holds the weight and two misses in a row drop it 10%. Nothing speeds progression up.

✓ Done only

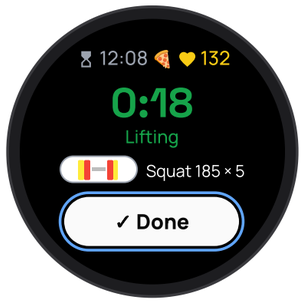

One button, no questions. Everything is assumed to go to plan.

Hit it

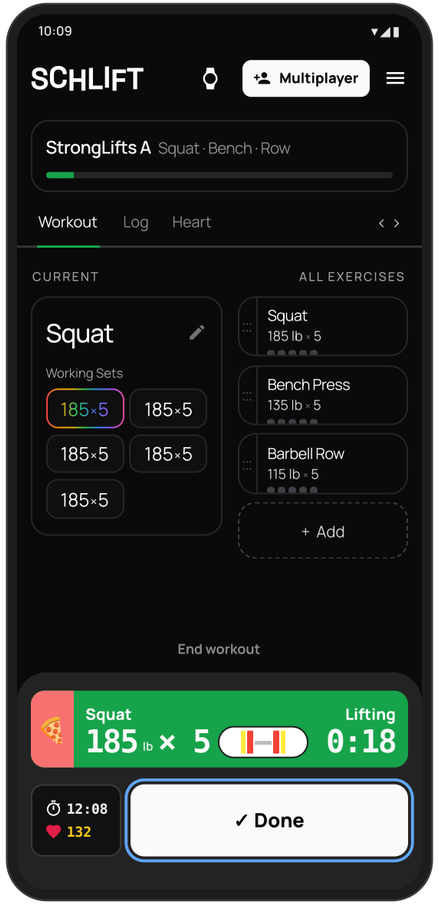

Apple Watch

Wear OS

One tap on ✓ Done.

Missed: got 3

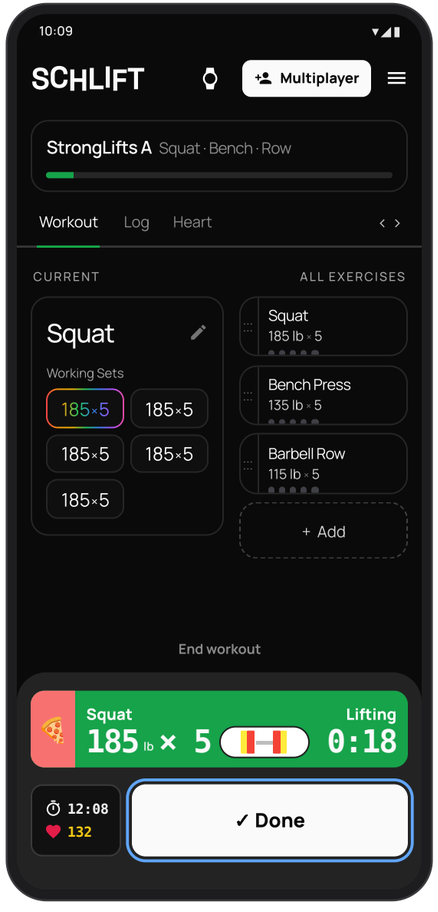

Apple Watch

Wear OS

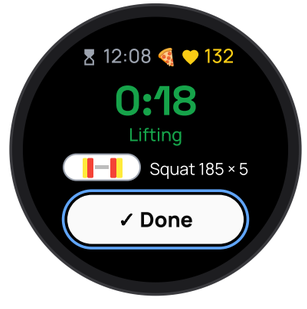

Tap Done, then fix the reps on the set's chip on the phone. Forget, and the miss counts as a hit.

Easy: not captured

Apple Watch

Wear OS

Not captured: an easy set is just Done.

Next session: normal progression only. Weight climbs on schedule whatever the sets felt like, unless misses are fixed by hand.
